# Policy drivers for the UK food authenticity programme

- Addressing H2020 societal challenges – ***Food security**, sustainable agriculture and forestry, marine and maritime and inland water research, and the Bioeconomy.*
- *A food and farming sector that is competitive and productive, in global demand, **resilient**, sustainable and **trusted**.*
- Food that is trusted by the consumer
- Productivity, data and working internationally

# Policy drivers for the UK food authenticity programme

- Following **horsemeat** a number of recommendations were made for UK government (Elliott review). These included **supporting opportunities for greater pan-European co-ordination and collaboration to tackle food fraud.**
- We have complex, changing **global food chains**
- **consumers preferences are changing**
- driving **new types of food fraud.**
- We need to stay ahead of the curve and work together.
- Need to **maximise use /impact of budgets**

.....against a backdrop of decreasing resources and increased globalisation

Elliott Review into the Integrity and Assurance of Food Supply Networks - Final Report

A National Food Crime Prevention Framework

## Food Authenticity Network

The Food Authenticity Network is a Department for Environment, Food and Rural Affairs (Defra) initiative to help bring together those involved in food authenticity testing.

The network, recommended by the Elliot review "Integrity and Assurance of Food Supply Networks", aims to raise awareness of the tools available to check for mislabelling and food fraud and to ensure that the UK has access to a resilient network of laboratories providing fit for purpose testing to check for food authenticity so consumers can have confidence in the food they buy.

## Food Authenticity Library

A library for food authenticity related documents is being developed. In the mean time, go to '[Research](#)' to find links, where available, to research reports, authenticity surveys and standard reference materials (SRMs). Further categories of documents

**Problems signing up?**  
Check out [this short guide](#).

## Forthcoming Events

**Government Chemist conference**

# Previous collaborative research

- EU framework projects (TRACE and FOOD INTEGRITY) and on a small number of individual projects.

## Case study – gelatine in meat

- EU problem
- inter-laboratory trial to validate a new proteomics method to determine the species origin of gelatine injected into meat
- involved labs in six countries and EU Commission
- Challenging - to find these other labs and secure support from the relevant government department/ministry
- There needs to be a simpler, more effective way to do this type of collaborative research across countries

# How does Authent-net help?

- The landscape for food fraud research across the EU is currently complex to understand, fragmented and inaccessible
- As a funder of authenticity research we don't know:
  - which countries have a research programme/funding on food authenticity,
  - how that funding works on a national level
  - what areas they are funding
  - what their future strategic priorities are
  - what their lab capabilities/areas of expertise are
  - if they would be interested in working collaboratively on issues.
- Before authent-net we didn't have a clear picture of who our counterparts were in other MS (other funding bodies) or have any established mechanism for contacting them

# What are the benefits to me from being involved in Authent-net ?

- Know who my counterparts are –
- link to the right people with the right knowledge
- A 'safe space' to share information, partner
- Be part of a network to collaborate on research
- co-ordinate with other funders with similar priorities
- maximise investment and impact
- Avoiding duplication
- Aligning research priorities to support food labelling law

# ***Authent-net will provide a shared approach, knowledge and the tools to help deliver collaborative research to better tackle food fraud***

- **Network hub**
- to understand what the priorities are in other countries, who funds what, how they prioritise, where their expertise lies, what commodities they are interested in.
- Brings together people to align strategic priorities and development of a common understanding of the issues.
- Have the opportunity to shape a strategic research agenda for Europe on food authenticity research.

# Preliminary funder discussions, Prague 2016

## Funder priorities

- Who are the funders in this area? (Gov, institutes, other?)
- How does funding works at a national level?
- Building not duplicating – bring together Food Integrity outputs into one place
- Safe space to network, collaborate, partner
- WPs need to connect – ‘golden thread’ focussed on aligning research priorities
- Connectivity between funder priorities, researchers and gaps
- Strategic Research Agenda a priority

# Funder discussion

# WP 'asks'

- WP1 – mapping capability a priority (rapid access to methods/expertise); less focus on mapping legislation
  - WP2 – need to know who we are, national funding priorities and gaps
  - WP3 – funders need a safe place/separate platform to network, build partnerships and collaborate; and shape SRA; build a 'funder network'
  - Workshops – funders/policy makers – can be the same!
  - WP5 – target audiences for dissemination?
-

# WP 'asks' - FARNH

- WP4 – FARNH
  - stick to being a data-base!
  - Needs to be simple/user friendly for funders
  - It needs to add value /bring existing databases together - not create a new one ('one stop shop').
  - Credible and trusted source of information
  - Like commodity reports
  - Include info on lessons learned from previous enforcement cases?
  - Accessing intelligence? Coordinated links to existing info
  - Long term sustainability - keeping it up to date after the project?
-
